CUTTILR’S GUIDE,  
To the Hot Springs of Arkansas.  
(Owned and Operated by the United States Government.)

The Hot Springs.

The Hot Springs of Arkansas are justly considered one of the wonders of the world, because crystal pure thermal water flows from mother earth, which is tasteless and inodorous, and though containing less mineral than most of the well water in general use, they have the reputation of having cured a greater number of invalids than any other springs known.

Within a small space, hardly embracing ten acres, upon the west side of the Hot Springs Mountains, 46 thermal springs issue forth from the mountain. (Three new springs have been opened since the survey made for the Commission, whose table giving the list of springs, etc., we publish herewith.) All these hot springs, excepting the Alum, are situated on the east side of the Hot Springs Creek, into which they all naturally flow. This creek is a swift mountain stream, having its head within about two miles of the Hot Springs, and it forms the natural drainage of the largest portion of the city. Some of the Hot Springs are very small, while others are large, bold springs, a few of them probably discharging as much water as all the others. The largest is known as the “Big Iron,” the hottest as the “Egg.” One from which the fair ladies loved to drink, was called the “Arsenic”; but all these names, as well as the springs themselves, to all outward appearance, are of the past. They were visited by thousands, by whom they were much admired, and the great interest all manifested who examined them and drank of their pure, sparkling waters as they bubbled out of the ground, should have been a sufficient cause to have forever preserved them in the original condition. But the powers ruled otherwise; they are closed to the human eye, but their waters still flow and are carefully preserved for the benefit of suffering humanity.

The superintendents of the Hot Springs Mountain Reservation have charge of all the hot springs and the government property here, and they have from time to time opened new springs and preserved them, as near as possible, in a state of nature. Mr. M. A. Eisele is the present efficient superintendent, and has recently issued an interesting report.
In June, 1906, I made a partial examination of the waters of the Hot Springs by boiling 400 milliliters of gallon of water, and found the contents approximately reduced to one gallon, as follows:

<table>
<thead>
<tr>
<th>Chemical</th>
<th>Concentration</th>
</tr>
</thead>

</table>

The waters are thoroughly impregnated with free carbonic acid.

The following analysis of the waters of one of the 43 springs is from the Government report recently published. The analysis was made by J. K. Hayward, Government Chemist.

**History**

The Indians visited these Hot Springs in large numbers long before the whites learned of their existence. Evidence of their having used such camping grounds are still to be found in the valleys of the springs. The earth is studded with fragments of small fragments of the flint-like travertine rock from which the springs have their origin.

The hunters and trappers who visited this region during the winter of 1841-42 in the valley of Hot Springs, and they left here only to make temporary repairs to their pack horses, found Indians from several tribes here with their skins. The Bois et Bara, a tribe of the Chickasaw, wintered in the Valley of 1841-42 in the valley of Hot Springs, and their remains are stillc seen at the entrance to the springs. The death, which occurred near the point where the line of the States of Arkansas and Louisiana cross the Mississippi River, in the waters of which he was buried on May 23, 1857, was a French trapper named Reve, who was drowned in the Hot Springs. After the death of his companion, the other French trappers spent several months at Hot Springs, making it their headquarters. They spent many nights in the springs, where they camped during their sojourn at the Hot Springs. After the death of their companion, the other French trappers spent several months at Hot Springs, making it their headquarters. They spent many nights in the springs, where they camped during their sojourn at the Hot Springs. They left for the winter in a very bad condition of health.

Thomas Jefferson, in 1844, sent the exploring party of Hunter and Dole to the Hot Springs. It is a fact that the waters of the Hot Springs are good for all purposes, but they were more in possession of the hot waters and the surrounding country than in the future, when there were any one in possession, or any evidence of improvements should be made by any party to establish a claim to the right or possession in the future.

The only improvements found here were the eight board houses that the United States had built before mentioned. The Hot Springs, made analyses of the waters and published the results. The location of these springs, the wonderful geological formations, etc., in their report to the President, after their return home, they made special mention of the Ouachita and Arkansas oil wells, which have since been productive. However, I did not examine the waters of the Hot Springs in 1806.
In 1828 there were but six or eight of these cabins remaining. There were no settlers living here in the vicinity at that time. John Belding, who had been living in the vicinity moved into the valley. Mr. Belding soon changed the appearance of this valley, he repaired the old cabins, built new ones, opened a small store, and kept a good house of entertainment.

Perciful and his family spent much of their time every summer at the springs, keeping boarders and upholding provisions—his farm, on the banks of the Ouachita River, furnishing all the corn and bacon used here for years. Mr. Belding moved to what is known as the Gaines farm in 1828, and his heirs based their right to pre-empt the 140 acres of land upon which are all the hot springs, on account of their family having lived here and cultivated a garden in 1828 and 1829.

Government Ownership.

In 1832 Congress made a reservation of four sections of land, the springs being at the center, which has ever since been known as the Hot Springs Reservation. From 1830 to 1848 the annual increase in the number of visitors was very large. In 1835 John C. Halle, whose after life was closely identified with the history of Hot Springs and the title to the land upon which they are situated, a right to which he claimed through the purchase of the Perciful pre-emption rights from the widow and son of John Perciful, who died in the spring of that year.

H. M. Frazier, who was Governor of Arkansas at the opening of the Civil War, settled at Hot Springs in 1843, and claimed the Hot Springs property. His claim was considered by the best lawyers as equally valid and just, being what was known as a New Madrid warrant, or patent, granted by the State of Missouri, to a man named Frazier, in the year 1843. The land was bought in 1848, by Gilmer Frazier, a brother of H. M. Frazier, Governor of Arkansas. The land was then surveyed and located on the Hot Springs, what was known among Western land titles as a New Madrid warrant, which were issued to parties whose lands were injured by earthquakes in 1811. The right to issue such warrants was granted by act of Congress, passed February 17, 1815.

In 1822, Major W. H. Gaines, who had been one of the largest planters on the Mississippi River at "Gaines Landing," Ark., moved to Hot Springs. He married Miss Mary Belding, one of the Belding heirs, and soon after all the rights of the Hot Springs
claimed by these heirs were assigned to him. There were some compromises made in the State courts by which Plaintiff was to hold possession of the lower which Plaintiff was to hold possession of the lower.

Many who obtained possession of valuable property under these leases afterward refused to pay rent, and some finally secured titles from the government, their claims having been favorably acted upon by the Hot Springs Commission.

Everybody was anxious to secure a piece of prop-
erty, and as there were no titles to be had for love or money, there was a race to get possession of some land, and the Supreme Court did decide the question of title in favor of the claimant and he took possession without a contest and bought the first and best chance to purchase at a nominal price. The Supreme Court decided that when the Supreme Court of the United States has decided a case that it is a final settlement of the question.

One of the claimants in the case was John A. Pikes, who held the claim on the authority of the Indian country, and he took possession solemn as the grave, listen and wait patiently, as it

John C. Hale protected his rights by force of arms even after he was well advanced in years and was no

Governor Control.

As previously stated, the U. S. Government made a reservation of the springs and surrounding country and took possession of them in 1873, setting them apart as a "National Park and Hot Springs Reservation for all time." This was done after an investigation by Congress had demonstrated that they were a cure for many of the ailments that humanity is heir to, and it too great a public blessing to become a monopoly in the hands of individuals.

The entire control and conduct of the springs is vested in the general government, which acts through United States superintendent appointed by the Secretary of the Interior. The Act of Congress fixes the price of the bath at all of the twenty-three bath houses, controls the water supply, and prescribes rules and regulations for the conduct of the managers and attendants, guarding the public interest in every way and preventing the marauders by baths at moderate prices.

Soon after the decision in the Court of Claims in 1877, Congress passed a bill creating a commission, and gave them almost unlimited power and jurisdic-

dion. They were to settle the rights of purchase and possession between the different claimants and individual citizens who had settled upon the Hot Springs reservation, and name the price to be paid for the same. Hot Springs at that time contained a population of about 1,000. The Commission was com-

posed of Ex-Senator Van Buren of Mississippi, Ex-Congressman Coburn of Indiana, and Ex-Gov-

ernor Stevens of Florida. It is needless to say that they were appointed by President Hayes. They had

Protestade on U. S. Government Reservation, Front of Bath House Row.
Hot Springs as a Health Resort.

Hot Springs stands without a rival; no other health resort in the world has such an extensive reputation. Within the last three years, every one at the hot springs has been annually 70,000, and 300,000 people have visited this resort, and it is safe to say that the health of these people has been greatly benefited through the use of the waters. The percentage of cures has been noted at over 90 per cent.

Residence of Dr. Howard F. Collins.

The wonderful cures are truly miraculous; they are so rare that evidence is credible. Language would only do justice to an exaggeration of the claims made by patients who have been cured.

List of Diseases Cured.

The following diseases are successfully treated, the failure to cure being due to the patient not being faithful in following the advice of the doctors: Rheumatism, gout, sciatica, neuralgia, gout, struma, thyroid, syphilis, nephritis, erysipelas, high blood pressure, scarlet fever, amebic dysentery, angina, pleurisy, pneumonia, gonorrhea, pyelitis, pneumonia, diabetes, phthisis, typhoid fever, appendicitis, goiter, cystitis, asthma, and all diseases of the kidneys and bladder, cancer, peritonitis, ulcer, appendicitis, and all diseases of the kidneys and bladder. The success in the treatment of these diseases is due to the purity of the water and the skill of the doctors.

Out of cities and towns in the United States only 5 have a low death rate as this Springs. If in British America, only 12 have a low death rate. In Central Europe, 20. The sanitation is the life of the city.

Surprise they are cured, and Joplin returns to their families and friends. Too much cannot be said to in- clude those suffering with diseases that can be cured by the waters. It is health, not death, or worse than death with many, causing un- told misery to their relatives for ages to come.

So happy has been the result with so many invalids who have been cured here that they recommend the hot water for every ill that flesh is heir to, and many come expecting cures for diseases for which these springs have never been known to be efficacious. But these visits, in some cases, have proved the use of the waters to be of great service, and in a few cases have performed cures after the physicians have requested the invalid not to bathe.

Residences being justly considered the greatest Health Resort in the world, Hot Springs is one of the most healthy cities, as the following figures taken from the president of the Health Department of this city, fully attest.

List of Diseases Cured.

The following diseases are successfully treated, the failure to cure being due to the patient not being faithful in following the advice of the doctors: Rheumatism, gout, sciatica, neuralgia, gout, struma, thyroid, syphilis, nephritis, erysipelas, high blood pressure, scarlet fever, amebic dysentery, angina, pleurisy, pneumonia, gonorrhea, pyelitis, pneumonia, diabetes, phthisis, typhoid fever, appendicitis, goiter, cystitis, asthma, and all diseases of the kidneys and bladder. the above diseases, in any form whatever, may feel assured that here at Hot Springs, with proper care and treatment, they will receive a perfect cure or be greatly benefited. The very worst cases find relief from pain and a stay of progress of the disease. I feel that I cannot do too much to induce the invalid to come to Hot Springs, for I am sure that nine out of ten are benefited.

**Government Endorsement.**

The following is taken from the official circular of information issued by the War Department at Washington:

"Salubrity may be reasonably expected at the Hot Springs in the following conditions: In the various forms of gout and rheumatism, after the acute or inflamed stage, in forms of kidney troubles, especially when the symptoms are not painful, in the treatment of scrofulous, pterygium of the eye, the earlier stages of locomotor ataxia, chronic lumbago, the early stages of cancer, and chronic diseases of the urinary organs, acute and chronic diseases of the female sexual organs, chronic diarrhea, dropsy, scrofulous diseases, incipient forms of chronic skin diseases, especially the squamous varieties, and chronic appendicitis, in material improvement in rheumatism."

Approved

R. S. ALGER,
Secretary of War.

**As a Resort for Ladies.**

In all ailments peculiar to women, Hot Springs has proved a godsend to that sex. The skin and complexion are both marvelously improved by removing the damaging causes, and the beautiful becomes restored to many a face by those waters. To bring about the work of beauty in this case, under the beneficial action of the water not only makes the patient look younger but it actually adds years to their lives.

Of late years there has been a large increase of lady visitors, and the treatment of many female complaints has proved the efficacy of these waters in that line of diseases. For the grand climacteric change of life these waters are highly regarded, and frequently entirely prevent long and dangerous spells of sickness. This critical period of a woman's life is pleasantly passed over by a short sojourn at these Springs and a free use of the thermal waters. Sterility is a consequence of functional disorder in cases with ladies, and to these so troubled the baths are of great value. It is an advantage in cases of advanced sterility, removing the cause in almost every case—regularity and happiness is the effect. Utterly diseases as a class, especially leucorrheas, are very satisfactorily treated. Owing to the great relaxation of the system, improvement is not always experienced by the bath, but they greatly improve the general health, and after a return home and a sufficient time has elapsed, all express themselves greatly gratified with the results.

There are now many families here on account of the ill-health of some of their members. Many of them hire small houses or rooms and go in houses and Bath innumerable and keep up a very lively and contented existence. This class of visitors is now quite large. They find neat cottages, furnished with the comforts of a little home, and their numbers are rapidly increasing.

Ladies need not have any delicacy in visiting these Springs; they are not only an invalid's retreat, but a fashionable watering place, and are being made one of the prettiest in the land.

**A Resort All the Year Round.**

Hot Springs is a resort for health, pleasure or sight-seeing at all seasons of the year, and is probably more so than any other watering place in the world.

Every day in the year for over twenty years the Hot Springs railroad has run from two to four passenger trains into Hot Springs, each containing from twenty-five to over one hundred passengers, making
A daily arrival from 50 to 500 (the latter only on special occasions). The total annual arrivals for fifteen years, it is claimed, will average forty thou-
sand to fifty thousand. We have rounded in former
years, upon the side tracks of this road, as many as
six private cars of notable visitors, and important
passenger are with us every day in the year.

The delightful climate and well-known efficacy of
the thermal waters at all times, make it a pleasant and
desirable place of resort at any season of the year.
Frivolities and social effects of the baths constantly,
and cannot wait for a change of seasons and it is not necessary. The
Northern States who are not really invalids, but who
feel the best effects of the extreme cold winter
weather of their native states, flock here in large
numbers every winter to escape it, and are more than
well paid for so doing. Outdoor exercise and rides
can be taken here in the winter months with the
same comfort (with an exception of a day or two
at a time), as in May or October in the North.

As hotels and boarding houses keep open doors
the whole year round with the exception of the Park
and Boarding House Hotel; and while it is true that there are
favorite seasons when there are more guests than
at others, they are sure of having to give a goodly num-
ber all the year round.

Flowers similar to those from the North prefer winter
and spring; from the South, summer and fall; but the
invalid, like the potted plant in the South, would
be easily killed if it were not watered (`as above, but
it can be readily seen why this is a resort at all sea-
sons, and it will so doubt continue to be so
every year. It would be extremely difficult to find a
more favorable situation for just such a resort. The
climate is not subject to either extremes of heat or
cold.

Sunstorms, so common in the North, are unknown
here, and the summer nights are always cool and
pleasant, enabling the sleeper to rest comfortably
and awake in the morning refreshed and invigorated.

Bathing.

As most of the visitors travel hundreds of miles to
bath in these thermal waters, a description of the
bathing houses and manner of bathing should be an im-
portant part of this article. The physicians give special
instructions and written or printed directions to each
invalid, after they have taken the appropriate exam-
ination. If, on examination, the physician discovers
the heart or lungs are diseased, the invalid is not al-
lowed to bathe, as the hot baths, in some cases, may
prove disastrous. Late experiments in these cases

have proved that if the lungs are not seriously af-
feeted or the organic action of the heart involved, careful bating is beneficial; simple perspiration is not considered heart disease. The usual directions are to bathe for from fifteen to thirty minutes in one en-
ehth; two to six minutes in the vapor room, where vapo-bathing takes place, three to five minutes in a
blacks, according to the time required to produce perspiration. Some physicians do not require or recom-
mand the latter. They also differ somewhat in their treatment. All are governed by the physical condi-
tion of the invalid and the nature of the disease. Some can remain in the water twice as long as others, and have it much hotter without any bad effect, while injudicious bathing by an invalid deblitaly by dis-
ease might prove injurious.

The time and lengths of experience in the treat-
ment of the different diseases that are curable by 
us, and with the intelligent use of the bath, under 
their directions, a very large proportion of all who 
come can be cured, should any thing be in their 
power to do in that way. It is now common for the 
first time patient to be careful how long they remain in the bath, and how hot the water is that they have wanted. A Commence of 90 degrees and increase gradually to 100 degrees Fahrenheit or higher. If your dis-
eases require a hotter bath, you should be governed by 
the advice of some physician.

The mode of bathing differs with the different dis-
eases. As far as the vapor is not used, and some physicians do not use it in any case. In cases of rheu-
matism, it is customary to dress the whole body in 
your disease for that purpose. In cases of rheu-

What the Government Has Done for 
Hot Springs.

The baths have a license to the Government 
for the use of the water, and all the revenue derived 
from this source and from other rentals is spent in 
 improvomng the reservation. An elaborate system 
 of parks has been laid out, on the mountains and in 
the valleys, for miles of beautiful mountain drives.

Use has been made of the hot springs by the public, to 
people can be festivity entertained in the public stores. A very general interest in this hot cave among our 
people is to be seen at any of the public stores. It is a loss to comprehend any 
good reason why its existence should not be publicly 
known and free access to it given to all who desire

17
The New Hot Springs Bath House.

This substantial bath house is constructed of white cut stone and pressed brick, and is situated on Fountain Street, less than 100 feet from Central Avenue, and immediately opposite the Arlington Hotel and the United States Government Reservation. It is one of the best in the city, and the last of the large bath houses built, is conveniently arranged, with offices, parlors, reception and cooling rooms; all of which are splendidly furnished. The bath rooms are constructed upon the latest and best approved plans, with improved porcelain tubs; the partitions are made of Italian marble, and every appliance for giving all kinds of baths, including tub, vapor, douche, shower, German-needle and electric. Two upper stories are devoted to furnished rooms, elegant in their appointments. These are nicely conducted and everything is so neat that all who find vacant rooms are in very good fortune, as it is desirable at all times to room conveniently to baths, and especially so when the quarters are satisfactory. Nothing is over bathing department, which is well lighted and ventilated from above. The whole building is heated by steam and lighted by electricity and gas. The whole house was built with great care, also furnished regardless of cost. The front office has recently been enlarged.

Letters of inquiry promptly answered and copies of this Guide mailed upon receipt of request for the same.

Those not having engaged quarters elsewhere can come direct to this house, and secure comfortable rooms without delay.

C. H. Y. Smith & Son, Owners and Proprietors.

The Superior Bath House

Is located on the Government Reservation near the largest and one of the best and hottest springs, so that the hot water flows only a few feet from the spring into the bath tub. It is claimed by the proprietors that the water directly from the spring is in its best condition to heal the sick, and that their experience has taught them that the best results are attained by bathing at the bath house nearest the springs. The proprietors of the Superior Bath House, therefore, claim that, from its location, it furnishes to its patrons the hot water in its best healing condition.

The house is furnished with the best quality of royal porcelain bath tubs, which retain the magnetism of the water while bathing. Electric, shower, needle and vapor baths are also given, and a gymnasium and forty private dressing rooms are furnished to accommodate the bathers.

The bathing department has been recently remodeled and refitted in first-class style and furnished with all modern improvements.

The Superior is the first bath house south of the Arlington Hotel and Bath House; it is a handsome brick structure, well built, with all necessary appliances of the very best kind. This bath house has always been patronized by the "select few," and is worthy of this class.

The hot water used here will color clear glass like amber or burnished gold in four hours, a very interesting process, and many beautiful souvenirs are here made, and secured by visitors, to take to their homes as pleasant reminders of their sojourn at these thermal springs.

Rev. Robert Proctor and C. N. Rix are proprietors of the Superior. Patrons are sure of courteous treatment. Henry Harris is manager.
The Maurice.

This new and elegant bathing establishment is situated in the center of Bath House Row on the Government Reservation, adjoining the Grand Entrance to the Government Park, and is one of the largest and finest in the Valley.

The entire building is devoted to building purposes. There are twelve large and commodious parlors elegantly furnished, 180 Private Dressing rooms, 1,200 square feet of Sun Parlors, a complete Gymnasium, and a modern Laundry. The bath rooms and cooling halls are fully equipped with wicker couches and lounging chairs. The tubs are Mott's celebrated "Victoria" roll rim, of the largest and finest design. The house is heated throughout by steam.

The usual bath tub is given in connection with the vapor, pack, douche, needle and shower baths, and...
a large, hot room for those who desire the Turkish bath. The latest appliances in sanitary plumbing and ventilation are used. Special attention has been given to the ladies' department, the parlors, dressing and bath rooms being furnished in a most sumptuous

As a special feature for the entertainment of our guests, we have engaged an orchestra under the leadership of Prof. H. Y. Miller. Morning and afternoon concerts are given, comprising the most popular selections. The Maurice is situated at the very Fountain Head of these great healing springs, and uses the entire flow of

Our Electro-Massage Department

Is complete in its equipment, and conducted by F. P. Hellwig, of Moscow, Russia, and H. M. Russell, with a staff of competent assistants, both male and female. Electro-Massage and the Original Swedish Movements form a treatment whereby the confidence of every educated person, and is endorsed by the leading physicians, it is especially recommended in the following troubles:

Neuralgia, all forms of Rheumatism, Stiff Joints, General Debility, Insomnia, Paralysis, Locomotor Ataxia, Nervousness, Muscular Atrophy, Constipation, Obesity, Writers Cramp, Torpid Liver. Sprains, Indigestion, Poor Circulation, etc., etc.

Our operators confine their work strictly to the orders given them by the medical profession, thus making a most desirable addition to the physician's course of treatment. The usual time given is from thirty minutes to one hour, varied to suit each case as per the physician's instruction, and for their services they are allowed to charge the regular Reservation rates of fifteen dollars per course of thirteen treatments.

The Swedish Movements are indispensable in connection with Massage, and are employed in all cases where indicated. They are particularly adapted to stiff joints and contracted muscles and to induce better circulation in all parts of the system.

The ladies' Massage Department is conducted by Mrs. Charlotte Hellwig, of Sweden.

In conclusion let us say that too often it occurs that the baths are not sufficient to bring the desired result, or there comes a stage where progress stops, and then is the time that the Electro-Massage Treatment steps in and carries on the good work.
imported Scotch earthenware (Victoria Royal Porcelain) of the largest and finest design. This "Scotch Porcelain" is celebrated, on account of the properties which retain the heat and all the medicinal ingredients of the water. The Palace is elaborately furnished, reading and writing room, a reclining and smoking apartment, 25 private rooms with couch, for taking a quiet nap after the bath, a private dressing room for each bather, an Electro-Massage department, under the supervision of Prof. R. H. Stein, M. M., who is a graduate of Kiel, Germany.

The Gymnasium is made a special feature and is used as the training quarters of the most noted athletes in the country. This department is fully equipped with the latest apparatus, and under the personal direction of a competent physical director.

The spring that supplies the Palace is situated in close proximity to the house.
Imperial Bath House.

This new bath house is situated on the United States Government Reservation, on Reservation Avenue, opposite Hotel Eastman. The bath department has stationary marble partitions, encaustic tile floors, sheet steel embossed ceilings; no wood surfaces except doors of entry. The house consists of office, two parlors, two cooling rooms, two hot rooms or improved sweating rooms, separate rooms for bath attendants, with extra dressing and cooling rooms, and gymnasium upstairs. The dressing rooms are private for one person, and others have lounge to lie on after bath. An electric bath and room for both ladies and gentlemen, and twelve vapor rooms, constructed of galvanized iron, with glass top and hollow walls. The tubs in this house are imported from England, being solid earthenware known as royal porcelain, with rolled rim or edge, and are of the latest and most approved pattern.

The spring from which the "Imperial" gets its supply of hot water reaches the bath house by natural flow at 140 degrees Fahrenheit. It is about ten feet underground and the water is never exposed to the air until it reaches the bath tub, coming from spring to tub in iron pipes encased in wood casings, and this spring is not used by any other bath house.

The writer chanced to witness the preparation of this spring and the pipes laid therefrom to the bath house, and was deeply impressed with the watchful care and personal supervision of one of the proprietors while this work was in preparation, and fully appreciated its importance.

The house is heated by a thorough system of steam heat, readily controlled and regulated for each department. The ventilation in the house is both wall and overhead. The usual tub bath is given with douche, the vapor bath, needles bath, shower bath, foot or leg bath, pack and electric bath, with the adjuncts of the hot room for extra or prolonged sweating where the temperature is raised, when necessary, to 130 degrees, all under the direction of skilled bath attendants. This house is generally acknowledged to be one of the finest in Hot Springs, and is patronized on its merits and known qualities. Letters of inquiry promptly answered and such information furnished as may be required by invalids and visitors before leaving home. P. J. McFadden is manager; he gives his personal attention, and is always on duty in and around the office of this beautiful bath house. Rix & Barnes, Proprietors.
Alhambra Bath House.

This beautiful structure, situated in the southern part of the city, on Ouachita Avenue, is by far the handsomest of all our bath houses, and is one of the most complete bathing establishments in the United States. Its exterior merits attention, being in the later style of Byzantine architecture when its richest development in the Alhambra, at Granada, Spain, and which suggested the name of the present edifice. Upon the interior has been lavished all that skill and experience could suggest, or money purchase. Rich marbles form the walls of many of the apartments, and the finest tiles are used throughout for the flooring. The bath rooms are finished in light natural woods, except the vapor rooms, which are marble and all varieties of baths prescribed by resident physicians are obtained here. All the tubs are porcelain-lined, with nickel fittings, and each furnished with a trap, preventing, completely, any escape of sewer gas. Heated with steam, a proper regulation of temperature throughout the entire establishment is assured. Patrons of the Springs will find this one of the most complete and elegant bathing places, with competent and polite attendants always in waiting. A limited number of well-furnished and well-cared-for rooms are rented to bathers at moderate rates. Notwithstanding the unusual advantages, the charges at the Alhambra are no greater than at any other first-class house.

W. L. Bancroft's Sons,
Proprietors.

The Alhambra Bath House.
This beautiful hotel is one of the largest and most substantially built hostelries in the South; it is truly a magnificent structure and a monument of beauty and solidity, as well as a credit to the enterprise and energy of its projector. The picture on page 36 is a half-tone engraving from photograph and is, therefore, true to life with but little embellishment. It shows the hotel from the Malvern Avenue and Park side, but only about one-sixth of the latter is shown; yet a very good idea is given of its general arrangement and beauty. As a playground for children, and for quiet walks for lady guests, it offers superior advantages above those of any hotel at this resort. It embraces eight acres of land, with a grove of forest trees, and is beautified laid out into lawns, flower-beds, trees, shrubbery, driveways, artificial lakes and ornamental fountains. It is also provided with croquet and lawn tennis, grass plats, swings, dancing and music pavilion, and an up-to-date bowling alley and billiard room. Thus are the guests supplied with every means of daily amusement in and out of doors. The Park band discourses sweet music three times daily, giving concerts in the morning, afternoon and evening; the dance usually following the latter. The Park is provided with a dancing-hall or pavilion entirely separate from the hotel, but connected by a short closed passage-way; it is, therefore, readily reached, and at the same time the music and the dance cannot disturb sleeping or invalid guests. The Park is especially desirable as a place of rest and sojourn for families, and is largely patronized by this class; the most refined and cultured people here find congenial associations; it is considered that the social atmosphere is purer and therefore the Park is largely patronized by ladies and children unaccompanied by husband and father.
During the past two seasons, the Park has received considerable improvement in both its exterior and interior; $70,000 has been expended by the new lessees for the owners; the exterior has been painted a light buff color nearly white, making a great change in its appearance and beauty; other improvements have been thorough and complete, covering every department and every room.

The hotel will accommodate over 400 guests. It cost a half a million, and is a giant of commodious quarters and luxurious equipment. It has 300 sunny rooms, each artistically frescoed by hand and equipped with cheerful furnishings, and is conducted upon the most approved methods. The internal construction embraces all the conveniences of the most modern hotels. The rooms are large, and each one provided with roomy closets, having an electric light; and many of them have a private bath-room and closet connecting. The hotel lobby and corridors are floored with handsome tile work and beautifully wainscoted in marble. These connect with the lofty spurs and ranges of the Ozark mountains the iron porches which encircle the house, affording views of the surrounding and adjacent mountains to be enjoyed. From the large observatory and sun parlor, 35 x 65 feet, at the top of the hotel, the grandest and most beautiful views of the surrounding and adjacent mountains are to be enjoyed.

The hotel lobby and corridors are floored with handsome tile work and beautifully wainscoted in marble. These connect with the lofty spurs and ranges of the Ozark mountains the iron porches which encircle the house, affording views of the surrounding and adjacent mountains to be enjoyed. The Golf Course of Hot Springs, recently completed, is one of the best in the country, and is so acknowledged by experts. It is situated nearer to the Park than any of the other hotels in the city, and its guests are frequent patrons of this delightful sport, which can be enjoyed in this climate every month of the year, and for 250 to 300 "sunny" days in each year. The bath house connected with the hotel is one of the best, and all kinds of baths are administered, including the Turkish and Russian, the German needle, vapor, hot air, etc. New porcelain tubs have just been put in. Guests usually prepare for the bath in their rooms, and take the elevator, which lands them at the bath-house door.

The cuisine and service at the Park is all that can be desired by the most fastidious. The new lessee, James R. Hayes, is a well-known hotel proprietor. Mr. Hayes conducts the Wayne at Detroit and Park at Sault Ste. Marie, and for years managed the Grand at Mackinac Island, and Arlington at Petoskey, Mich. The Park is now being conducted upon both the American and the European plan; the Café Grill Rooms and Restaurant are the handsomest and best in the Southwest. Many other desirable improvements have been made since last season.
The Arlington Hotel.

This hotel is situated upon the northwest corner of the Government Reservation, and enjoys the privilege of being the only hotel on the reservation. Of this distinction the proprietors are justly proud; but aside from this, the Arlington is excellently located, being upon Central Avenue, the main street of the city, and at the corner of Fountain Street, leading to the world-renowned "Happy Hollow." It is the only one of the three large hotels keeping open all the year round, and does a prosperous business at all seasons.

The Arlington is built upon the site of the old Arlington, which enjoyed the reputation of being the largest and best hotel at this great resort for a period of nearly twenty years, and the old Arlington replaced, upon the same site and within the recollection of the writer, the Rector House; this was owned by and named after the late Governor H. M. Rector, who at that time and for many years, was one of the original claimants for all this valuable property and had his choice of locality for this hotel.

The architecture of the Arlington is very picturesque and of the Moorish design. It is four stories high, built of brick, stone and iron, and has a total frontage of 650 feet. A broad veranda, or colonnade, extends the whole length of the building, and two graceful towers, twenty feet square, extend to a lofty height above the hotel at two of the principal corners on the main street front, which afford excellent views of the adjacent mountain scenery, also of the streets, the city and the Government promenade.

The New Arlington was opened in the spring of 1893. The new building and its equipment cost five hundred and fifty thousand dollars, and is justly classed as a first class modern hotel in all its appointments. During the past summer the floors of the lobby and all the lower halls were newly laid with white Italian marble, everything painted and re-decorated, making the interior of the hotel handsome than ever; the cost of these numerous improvements exceeded twenty-five thousand dollars.

Iron bridges connect each of the main halls with the Government walks and drives on the Hot Springs Mountain Reservation.

The Arlington Baths.

The bath house of the same and connected with the Arlington Hotel is nearly surrounded by hot springs. The thermal waters used for both bathing and drinking purposes are from springs directly back of the hotel, upon the Hot Springs mountain, and by natural gravity flow to the baths and to the drinking fountains of the hotel.

The bathing department is so arranged that guests from any part of the hotel, who may not be able to walk, can be wheeled in rolling chairs (furnished by the hotel directly to the bath).

The bath house is modern in all its departments, and all kinds of baths are given, under the care of skilled and careful attendants. The improvements made this season include a new floor of "encaustic tile" and is very handsomely ornamented; the new tubs are imported "royal porcelain," and are of the largest and best manufacture.

Mr. Lyman T. Hay has managed the New Arlington ever since its opening in March, 1893, and the thousands of guests who have enjoyed its hospitality, under his direction, will be pleased to learn of his continuance in this capacity. Assisted by a corps of efficient and courteous employees, his constant en
deavor is to make every guest perfectly comfortable and entirely at home. Correspondence solicited and promptly answered. Address, LYMAN T. HAY, Manager, Hot Springs, Ark.

THE ARLINGTON HOTEL CO., Proprietors.

The Eastman Hotel.

This is the largest hotel at Hot Springs, and though it is open only through the busy season, there have been several years when the better class of visitors could not have been accommodated but for the commodious Eastman. It has 520 guests' rooms, and during or two seasons, when largely patronized by families, it is said to have accommodated one thousand guests. The house is so constructed in the shape of an L—that all of the rooms are front rooms, facing either one of the four streets which surround it, or the open court, which is beautifully shaded by lofty forest trees; and from the rooms facing it a commanding view is to be had of the Army and Navy Hospital, the Hot Springs and West Mountain, and the Valley of Hot Springs. All of these views and the rest of the city and adjacent mountains are seen to the best advantage from the lofty observatory, nearly 200 feet high. Most of the rooms have connecting doors, so they can be arranged for single or in suites, and many are equipped with private bath-rooms and toilets. The main halls, twelve feet wide, extend through the center of the entire building, each forming a grand promenade 675 feet long.

No fire is ever lighted in the house, except in the magnificent fire-places in the parlors and lobby, and in the kitchen, which is positively fire-proof. The building is heated throughout by steam and lighted by electricity, both arc and incandescent systems being used, and the power furnishing them is in another building on the opposite side of the street, where is also situated the Eastman bath-house, which is connected with the hotel by an enclosed bridge. The bath-house contains eight parlors and forty bath-rooms, the latter are constructed entirely of brass and marble, and the bath-tubs lined with the most expensive Roman porcelain.

The public rooms of the Eastman consist of a grand parlor, ballroom, ladies' reading-rooms, gentlemen's parlor, card-rooms, billiard-room, gentlemen's reading and writing room, dining-hall and ordinary—all of generous dimensions—and a superb lobby, containing a news and cigar stand, stenographer's desk, and all other conveniences. Here a expert orchestra gives three daily concerts, and also provides music nightly, for dancing in the grand ballroom adjoining.

The service throughout, at the Eastman, is unexceptionable, and the cuisine is of the highest excellence. Rates range from $21 per week upward. Communications in regard to accommodations should be addressed to Lyman T. Hay, Manager, Hot Springs, Ark.

BOARD OF DIRECTORS

Geo. W. Parker, St. Louis. S. H. Stitt, Hot Springs.
The Majestic.

This new and beautiful hotel is upon the site formerly occupied by the Avenue Hotel, one of the best hotel situations in Hot Springs. It is just above the junction of Whittington and Park Avenues, upon the latter, which for years has been considered one of the healthiest streets in the city, and upon which are located more handsome private residences of prominent citizens than in any other section.

The Majestic is about equal in size to any hotel at Hot Springs, with the single exception of The Eastman, and in its construction, which has taken considerably over one year, has been adapted all the latest appliances and conveniences which are only to be found in the largest, newest and up-to-date hotels in large cities or resorts. They include stationary marble wash-stands, open plumbing and with hot and cold water in every room; electric alarm; telephone connection with the office in every room, where central office or long-distance phones may be connected at a moment's notice, allowing visitors the opportunity of having private conversations in their rooms with family or friends at their homes, or with their partners or employees in their own business office 1000 miles away.

There are thirty-six suites of rooms having private baths and toilets. Six public toilet rooms are to be found upon each floor, large electric elevators, three flights of stairs, and each floor has connection with the ground by bridges or other outside escapes back to mountain.

The hotel is considered as fireproof, having steam heat and its own electric-lighting plant, which also supplies power to run electric fans in every room when needed. Upon the first floor is the commodious and handsomely decorated and appointed office and lobby, connected with which are a handsome cafe, billiard rooms, etc. On the second floor is the elegant dining room, having windows on four sides, affording ample light and ventilation. On this floor are also to be found the ladies' parlors and the entrance to the bath house of twenty tubs, which is built upon elevated ground, and in the court surrounded by the three angles of the hotel. This bath house is supplied by hot water direct from their spring on the Hot Springs Mountain, and the newest appliances of modern make and convenience are used in the construction of the bath house as well as the hotel.

All car lines of the city pass the house. Both lines pass through Central Avenue, the business thoroughfare of the city, and transfers are given on all lines.

The completion of The Majestic necessitates the abandonment of the combination name, as applied to the "Three Big Hotels," and the adoption of the "Big Four;" because The Majestic is certainly entitled to join this combination. We do not mean as a combination of interests.

The Majestic is under the management of Geo. L. Smith, formerly proprietor of the Avenue Hotel, to whose untiring energy Hot Springs is indebted for this Majestic Hotel building. Its completion is very opportune, as the increased number of visitors to this resort demand its full capacity for their shelter and comfort.
The New Waverly.

This popular hotel is one of the leading hostelries of this great resort. For the benefit of new readers we will describe its location and situation, which for years has been considered one of the best localities in the city. It is situated on Park Avenue, one of the most desirable residential streets in the city, and upon which many of our leading citizens reside, and it is only a few hundred feet from the junction of Park and Whettington Avenues and but a few minutes' walk from the business center of the city. The electric cars pass the door every few minutes, which convey passengers to all parts of the city and provide transfers when desired. This has always been considered a very healthy locality, as it is considerably elevated above the lower valley, and the drainage is perfect.

This hotel for over twenty years has been one of the nicest, neatest and most popular hotels at Hot Springs for families and quiet people, who visit this resort in large numbers. We are pleased to state it is so now, and this fact is stated without reserve; we hope it will be fully understood by those for whom it is intended, and by whom we are assured it will be appreciated.

The New Waverly is open all the year round—summer and winter—and during the last summer and fall its business was up to its full capacity, quite an unusual occurrence at that season of the year for any hotel at this resort.

The new hotel only reopened its doors to the public two years ago, and the numerous friends of Mr. and Mrs. L. D. Cain heartily rejoiced with them in celebrating the happy event. For over twenty years it has been their happy home, and it was here their two beautiful daughters were born.
The New Waverly, we are happy to announce, is larger and better, and it is also more convenient and contains a greater number of the latest improvements than the old house. Nothing has been omitted in the rebuilding and refurnishing, and everything obtainable was secured; it is in the interior of the New Waverly that this is more noticeable than in the exterior. The cuisine is all that can be expected, because it is the very best, great care being taken to provide that most needed for invalid guests.

The New Waverly Bath House.

This bath house is connected with the hotel of the same name and is a great convenience to the guests of the hotel. Former patrons will more readily appreciate this advantage when they remember the ride or walk to the baths a few years ago. Now they can prepare for the baths in their room and in their bathing robe take the elevator to the bath rooms, and after the bath return to their rooms and enjoy a nap before luncheon or dinner.

To those who have never taken an hour's sleep after bathing we are pleased to recommend it, as it is not only enjoyable but highly beneficial, especially if the baths are at all enervating.

The Waverly Hotel Co., proprietors; L. D. Cain, manager, to whom all letters of inquiry, or a request for a copy of this Guide should be addressed.
Hotel Pullman.

This is one of the best of the hotels outside of the "Big Four." It is built of brick and granite, and is practically fireproof. It was built with the view of eventually adding two or three more stories, and it is probable that this improvement will be made within the next two years. It is situated at corner of Central Avenue and Bath Street and immediately opposite Bath House Row and the Army and Navy Hospital. Government Reservation. It contains all the modern conveniences, elevators, steam heat, and is complete in all departments; office, dining-room, and fine bar-room on the ground floor. The rates are reasonable, when it is considered that it is a strictly first-class hotel and can accommodate one hundred and twenty guests.

The view from the ladies' parlor of the Pullman is beautiful, especially of Central Avenue. Opposite are Bath House Row, the Army and Navy Hospital, Hot Springs Mountain Reservation, and Government Promenade. These are so close at hand that they seem to belong to the hotel.

Dining Room.

The rooms of this house are unusually large and are very handsomely furnished. These have just been refurnished, also new carpets and decorations; and in fact the whole interior has undergone a thorough renovation. The Pullman is largely patronized by commercial men on account of its central locality, and for the same reasons it is exceedingly popular with bachelor visitors.

Rates: Summer and Fall, $10.50 to $15.00 per week; $2.00 to $2.50 per day. Winter and Spring, $12.50 to $17.50 per week; $2.00 to $3.00 per day.

Joseph Longinotti is owner and proprietor, and with commendable pride he considers The Pullman "The Gem of the Valley."
The Hotel Milwaukee.

This hotel has recently added one story to its height, which was necessitated by the increased patronage the Milwaukee has received; other alterations and improvements have also been completed, which add not only to its capacity, but to its beauty and convenience as well. A handsome electric elevator is one of these improvements, and other modern conveniences, including both gas and electric lights in every room throughout the house. The hotel is splendidly furnished, some of the new rooms contain handsome iron bedsteads and other furniture equal to the best to be found at any hotel at this resort, not excepting the very largest. The house is so constructed that every room has an outside exposure, window and view. From the front porches the view of the pine-clad mountain scenery, the city, the bath-houses, etc., is varied and interesting; this is particularly true of the upper floor and porch, as they overlook adjacent houses which more or less obstruct the view on the lower ones. In this connection we may add that guests who secure rooms on the upper floor are the most fortunate, not only in having a finer and more extensive outlook, but because this is the brand new part of the hotel, and everything on this floor is new, of the best quality. An objection usually made to occupying rooms upon the upper floors of any hotel is the very natural fear in case of a fire; but we are glad to state that this does not apply to the Milwaukee, as the house adjoins the West Mountain and from the two upper floors are bridges and stairs leading to this mountain; these bridges are reached from the rear end of the halls, making an escape, in case of fire, as easy as one would be from the ground floor.

The three halls of the hotel, to which all sleeping apartments are connected, are in the form of a cross, the transverse hall being near the front of the hotel and connecting with all front rooms, while the long hall opens upon the front verandas at one end and to the bridges in the rear, leading to the mountain as above described.

The Milwaukee is a substantially built brick structure, and as its proprietor is also its owner, and his careful supervision extends to the faithful employees of the hotel, all guests may feel perfectly safe, and be assured of kind and courteous attention.

The situation of the Milwaukee at the end of and facing Bath street, one short block from Central avenue (the principal thoroughfare of Hot Springs) and Bath House Row, makes it especially desirable to all classes of visitors, because it is at the very center of business and the baths, and yet just about 150 feet from the main street and noisy part of the city.

The dining-room is on the first floor, off from the office and ladies' parlor; the dining-hall is not large, and its increased dimensions are contemplated, but it is particularly pleasant, neat and homelike; and best of all, its tables are abundantly supplied with the very best articles of food obtainable, and the service is good. The rates are $10.50 to $15.00 per week, and $2.00 to $2.50 per day in summer and fall. Winter rates, $12.50 to $17.50 per week, and $2.00 to $3.00 per day.

J. P. Hickey, Owner and Proprietor.
The Eddy.

Completed and Open to the Public, January, 1904.

The Eddy is a five-story stone and brick building, and is the handsomest small hotel in Arkansas. It is located on Exchange Street, in same block as Arkansas National Bank. This is the geographical center of Hot Springs. The Banks, the Western Union Telegraph and Postal Telegraph Offices, the office of the Superintendent of the United States Reservation, the Army and Navy Hospital, Public Library, Bath House Row, the United States Public Fountains, Frisby's Restaurant and Everland's Cafe, all being situated within a radius of one block of The Eddy.

The interior of The Eddy is equipped with every modern convenience and luxury. The furniture is the best in Bird's-Eye Maple, Mahogany and Oak. The floors are covered with Wilton Velvets. The walls are in soft tints of green, red and buff. The ceilings are metal and frescoed. A number of the rooms are equipped with Cheval mantels and open grate fires, and in addition the entire house is heated by steam. The most up-to-date sanitary plumbing is used throughout the house. The rooms are equipped with porcelain lavatories with hot and cold water; toilet and bath-rooms are on every floor. Every room is an outside room, perfectly lighted, and in addition to the window ventilation, there are air-shafts extending from the basement to the roof, each room at the ceiling connects with the shafts, giving perfect and sanitary ventilation. There are sun parlors on each floor, enclosed in glass, and on top of the building is an observatory sun parlor, which extends with open balcony on the roof which affords fine views of the city. The Eddy was built after plans drawn by the late W. E. Russell, architect. The central idea being to combine with architectural beauty the highest possible comfort to guests at all seasons of the year. The result is a house cool in summer and warm in winter.

The Eddy caters to that discriminating and fastidious class of tourists and commercial men who appreciate first-class service. The Eddy being in close proximity to the leading cafes and restaurants of the city, offers its room service on the European plan only.

Room rates from $1.00 to $2.50 per day. Rooms can be engaged single or en suite.

A. H. Williams & Son, Prop'rs,
Hot Springs, Ark.

How to Reach Hot Springs.
For about twenty-five years this great health
resort had but one railroad, the Hot Springs, and
this for most of the time was a "narrow gage,"
connecting at Malvern, 22 miles distant, with the
Iron Mountain Route.

Now we have two lines, giving us connection
with two of the greatest railroad systems in the
United States, viz., the Missouri Pacific and the
Rock Island; the former by the Little Rock &
Hot Springs Western and the Iron Mountain
Route, and the latter by the Choctaw, Oklahoma
& Gulf, which owns the old H. S. R. R, and which
was itself recently purchased by the Rock Island.

See the advertisements of these two great systems,
or write to each or either for further informa­
tion, rates, etc.

The Barry Hospital.
Hoping that some of our rich and charitably
disposed visitors may aid this charity hospital,
we call attention to it. It has existed for about
twenty years, but for the lack of funds but little
improvement has been made.

Its accommodations are inadequate to the de­
mands made upon it by the unfortunate people
who seek its aid. Congress passed a bill granting
a building site, though without money it cannot
be improved. But for the perseverance and
charitable heart of its founder, Dr. W. H. Barry,
it would have ceased to exist long ago. This is a
deserving charity, worthy of investigation and
aid.

For rates, $7 to $10 Per Week.

S. Medical Board's permit to use the Hot Water at Hot Springs, Arkansas.
The AUSTRALIAN REMEDY

A New Discovery

Death to Acne-Eczema diseases and all similar complaints again made possible now more cases of Acne have been cured by the remedy.

A Speedy and Permanent Cure

Has been made in several hundred cases in three years.

Acne-Eczema is purely a skin disease and not a blood disease. It is caused and kept irritated by a parasite that lives and thrives in pure blood, therefore no blood purifier will do.

In the case of Acne-Eczema, the parasite has driven the parasites back deeper into the skin, and when the strength of such applicates is exhausted, the parasites return again, and the patient is worse than before.

A speed and permanent cure is therefore, to exterminate the parasite by exterminating the root of the skin.

A ton of this parasite is killed.

The disease is cured.

No doctor can successfully infest this parasite, I claim, as my Australian Remedy is known to destroy the only known vegetable spirit which this parasite will find that kills and fully combusts it.

It has never been made at the expense of the patient, and has been as free from irritation to the skin as any other known external application.

The remedy has been used in several hundred cases in three years, and never in a case where the use has been discontinued, have we been given a thorough trial.

DANGEROUS SURGERY

Death follows the Surgeon's Knife—not the Surgeon's fault, of course—he can't help it, you can.

CHINESE CURE, Cures Piles Quickly

People go along for years suffering with Piles, then try this and that and the other, but carrying a buckeye to getting treatment from a physician. They treat temporarily, yes, they may, but they are cured only to relapse and to bring on something else to cure.

Chinese Pile Cure. It can be used in light cases to some extent. Other applications may cure and not cure. Chinese Cure is always correct, always brings comfort at once. Try this; I can assure you that no other cure will give you more comfort in the relief of piles. It is the wonderful cure and the only known cure.

The North Highlands.

The North Highlands is the desirable residence part of North Hot Springs. It begins about five blocks north of the Majestic Hotel and lies to the left of Park Avenue, going to the north border of the city. Magnet, Holly, Cave and Bower Streets cross the property. There are several hundred lots in the property and they are reserved exclusively for sale to white people. The property is owned by The North Hot Springs Building and Land Co.

The North Highlands is the desirable residence part of North Hot Springs. It begins about five blocks north of the Majestic Hotel and lies to the left of Park Avenue, going to the north border of the city. Magnet, Holly, Cave and Bower Streets cross the property. There are several hundred lots in the property and they are reserved exclusively for sale to white people. The property is owned by The North Hot Springs Building and Land Co.

The residence of the late W. E. Russell, architect, has been completed by Mrs. Russell, and is one of the strikingly handsome residences of the city. The North Hot Springs Building and Land Co. offers residence sites to home builders who wish to build nice homes at very reasonable prices and on monthly payments if desired. Or the Company will build just the kind of house you want and let you make a cash payment and pay balance by the month. If you can afford to pay rent anywhere else you can afford to own a home in the North Highlands.

Anyone expecting to own a home in Hot Springs should look over this beautiful property before deciding on a location. Dr. V. H. Hallman is president, and Benj. W. Eddy is treasurer and manager of the Company.

JAY SELEN Gould SCULPTURE SPRINGS.

Two miles south of Ryder's Blood Springs has just been made the discovery of a source of exceptionally pure and palatable mineral water, which has been named by Mr. J. McDaniel, of Hot Springs, Arkansas, JAY SELEN Gould SCULPTURE SPRINGS. This water is of the warm, medicinal type, and is free from iron and other impurities. It is said to be of the best quality for therapeutic purposes, and is especially adapted for the treatment of diseases of the skin, such as scabies, ringworm, eczema, psoriasis, etc. The water is very refreshing and invigorating, and is said to have the power of restoring health to those who suffer from chronic diseases. It is also said to have a beneficial effect on the digestive system, and is recommended for the treatment of constipation and other digestive disorders.
